

The Water Beneath Your Feet

Where does our water come from?

When you turn on your faucet to fill a glass or brush your teeth, do you think about where the water comes from? This well provides Camp DREAM with clean groundwater. Why not just get water from the pond? It's too far away and it's not as clean! When rainwater soaks into the ground, it filters deep through the soil and collects underground. Surface water (like water in Metcalf Pond) doesn't go through this natural filtration system, so it is not as clean.
